

## SDG Goal 9 Industry, innovation and infrastructure

**SDG Target 9.2** Promote inclusive and sustainable industrialization and, by 2030, significantly raise industry's share of employment and gross domestic product, in line with national circumstances, and double its share in least developed countries

**SDG Indicator 9.2.1** Manufacturing value added as a proportion of GDP and per capita

1. Name of data series	
<b>Manufacturing gross value added as a proportion of GDP</b>	
Compliant with SDG metadata: no	<a href="#">SDG Metadata</a>

2. Definition of indicator	
The indicator shows the manufacturing value added (MVA) as a proportion of Gross Domestic Product (GDP). The share of MVA to GDP reflects the role of manufacturing in the economy and a country's national development in general.	
3. Comparison with SDG metadata (as of 11/07/2017)	
The sub-indicator is neither calculated in US dollars nor given in constant 2010 prices.	

4. Data description	
The data on GDP is calculated by the Federal Statistical Office's National Accounts as a secondary statistic. GDP is adjusted based on a price base changing every year (previous year's price base). After several revisions due to new data input, final results are available four years after the first preliminary release.	
5. Calculation method	
$\text{MVA as a proportion of GDP} = \frac{\text{MVA (EUR bn)} \times 100 \%}{\text{GDP (EUR bn)}}$	
6. Unit of measure	%

7. Timeliness	8. Frequency
t + 8 months (first results mid-January)	Annual
9. Last regular revision	10. Revised period
August 2017	2013-2016

11. Accessibility of source data

## SDG Goal 9 Industry, innovation and infrastructure

**SDG Target 9.2** Promote inclusive and sustainable industrialization and, by 2030, significantly raise industry's share of employment and gross domestic product, in line with national circumstances, and double its share in least developed countries

**SDG Indicator 9.2.1** Manufacturing value added as a proportion of GDP and per capita

1. Name of data series	
<b>Manufacturing gross value added per capita</b>	
Compliant with SDG metadata: no	<a href="#">SDG Metadata</a>

2. Definition of indicator	
The indicator presents the manufacturing value added (MVA) per capita. MVA per capita is the basic indicator of a country's level of industrialization adjusted for the size of the economy.	
3. Comparison with SDG metadata (as of 11/07/2017)	
The sub-indicator is neither calculated in US dollars nor given in constant 2010 prices.	

4. Data description	
The data on GDP is calculated by the Federal Statistical Office's National Accounts as a secondary statistic. GDP is adjusted based on a price base changing every year (previous year's price base). After several revisions due to new data input, final results are available four years after the first preliminary release.	
5. Calculation method	
$\text{MVA pc} = \frac{\text{MVA (EUR)}}{\text{population (number)}}$	
6. Unit of measure	EUR

7. Timeliness	8. Frequency
t + 8 months (first results mid-January)	Annual
9. Last regular revision	10. Revised period
August 2017	2013-2016

11. Accessibility of source data

## SDG Goal 9 Industry, innovation and infrastructure

**SDG Target 9.2** Promote inclusive and sustainable industrialization and, by 2030, significantly raise industry's share of employment and gross domestic product, in line with national circumstances, and double its share in least developed countries

**SDG Indicator 9.2.1** Manufacturing value added as a proportion of GDP and per capita

1. Name of data series	
<b>Manufacturing gross value added as a proportion of total gross value added</b>	
Compliant with SDG metadata: no	<a href="#">SDG Metadata</a>

2. Definition of indicator
The indicator shows the manufacturing value added (MVA) as a proportion of total value added to reflect the role of manufacturing.
3. Comparison with SDG metadata (as of 11/07/2017)
The indicator is not compliant with the international metadata description of the SDG indicator 9.2.1 in so far the data is neither calculated in US dollars nor given in constant 2010. Additionally, it is not calculated as a proportion to GDP.

4. Data description	
The data on GDP is calculated by the Federal Statistical Office's National Accounts as a secondary statistic. GDP is adjusted based on a price base changing every year (previous year's price base). After several revisions due to new data input, final results are available four years after the first preliminary release.	
5. Calculation method	
$\text{MVA as a proportion of total gross value added} = \frac{\text{MVA (EUR bn)} \times 100 \%}{\text{total gross value added (EUR bn)}}$	
6. Unit of measure	%

7. Timeliness	8. Frequency
t + 8 months (first results mid-January)	Annual
9. Last regular revision	10. Revised period
August 2017	2013-2016
