4. Data description	
<p>The data is taken from the German Victimization Survey. The survey is telephone based with 35.503 observations for the year 2012. It is based on a random sample of the population living in private households, being 16 years or older and being available via telephone.</p> <p>Since people with relative high education levels are overrepresented in the sample and young adults (age 18-34) underrepresented compared to the general population, the answers were weighted to account for the unequal probability of taking part in the survey for these subgroups.</p> <p>In the survey, individuals reporting being at least once victim of a physical assault in the last 12 months were asked whether they informed the police about the incident. This question was asked with respect to up to five incidents of physical assault per respondent. The answers to this question were used to calculate the indicator.</p>
