SDG Goal 6   Clean water and sanitation

SDG Target   6.a   By 2030, expand international cooperation and capacity-building support to developing countries in water- and sanitation- related activities and programmes, including water harvesting, desalination, water efficiency, wastewater treatment, recycling and reuse technologies

SDG Indicator   6.a.1   Amount of water- and sanitation-related official development assistance that is part of a government-coordinated spending plan

1.   Name of data series
ODA (gross disbursements) for water and sanitation

Compliant with SDG metadata: yes	**SDG Metadata**

2.   Definition of indicator
The data series measures German official development assistance (ODA) to the water and sanitation sector and agricultural water resources. It is measured in gross disbursements of the resources to the partner country (versus commitments of resources). Official development assistance (ODA) is defined as aid provided by official agencies that promotes and specifically targets the economic development and welfare of developing countries. For ODA flows, data on the sector of destination are recorded using 5-digit codes so called purpose codes. Water and sanitation is identified by all the purpose codes starting with 140. These cover drinking water supply as well as sanitation systems, waste management and river basins' development amongst other topics. Furthermore agricultural water resources such as irrigation, reservoirs and ground water exploitation for agricultural use are covered by purpose code 31140. The purpose codes 41050 on flood prevention and control and 23220 on hydro-electric power plants -which are thematically also part of the water sector- are provided in a separate time series, as the global SDG metadata is not conclusive regarding their inclusion into the indicator.
3.   Comparison with SDG metadata (as of 11/07/2017)
The data series provided is compliant with the global SDG Metadata, as the use of ODA data in general is stated as an alternative. Even so it should be noted that the time series provided does not differentiate whether the ODA is part of a government-coordinated spending plan. As the global SDG Metadata is not conclusive as to whether the purpose codes 41050 und 23220 have to be included, said purpose codes are presented in a separate time series.

4.   Data description

ODA is the resource flows to countries and territories on the OECD Development Assistance Committee (DAC) List of ODA Recipients and to multilateral development institutions that are:
      i. Provided by official agencies, including state and local governments, or by their executive agencies; and
      ii. Concessional (i.e. grants and soft loans) and administered with the promotion of the economic development and welfare of developing countries

as the main objective. The DAC list of countries eligible to receive ODA is updated every three years and is based on per capita income.	

5. Calculation method	
Not applicable	

6. Unit of measure	Mn USD, constant prices (2016)

7. Timeliness	8. Frequency
t + 11 months	Annual
9. Last regular revision	10. Revised period

SDG Goal 6 Clean water and sanitation

SDG Target 6.a By 2030, expand international cooperation and capacity-building support to developing countries in water- and sanitation- related activities and programmes, including water harvesting, desalination, water efficiency, wastewater treatment, recycling and reuse technologies

SDG Indicator 6.a.1 Amount of water- and sanitation-related official development assistance that is part of a government-coordinated spending plan

1. Name of data series
ODA (gross disbursements) for other related water and sanitation purposes
Compliant with SDG metadata: yes   **SDG Metadata**

2. Definition of indicator
The data series measures German official development assistance (ODA) to other water and sanitation related purposes.

As the global SDG metadata is not conclusive regarding the inclusion of flood prevention and control (purpose code 41050) and hydro-electric power plants (purpose code 23220) into the indicator on ODA for water and sanitation, this time series is presented here separately. It is measured in gross disbursements of the resources to the partner country (versus commitments of resources).

Official development assistance (ODA) is defined as aid provided by official agencies that promotes and specifically targets the economic development and welfare of developing countries. For ODA flows, data on the sector of destination are recorded using 5-digit codes so called purpose codes.

ODA for water and sanitation in general is provided by the time series "ODA (gross disbursements) for water and sanitation (purpose codes 140*** und 31140)" covering inter alia drinking water supply as well as sanitation systems, waste management and river basins' development amongst other topics. Agricultural water resources such as irrigation, reservoirs and ground water exploitation for agricultural use are also included.

3. Comparison with SDG metadata (as of 11/07/2017)

The data series provided is compliant with the global SDG Metadata, as the use of ODA data in general is stated as an alternative. Even so it should be noted that the time series provided does not differentiate whether the ODA is part of a government-coordinated spending plan.

As the global SDG Metadata is not conclusive as to whether the purpose codes 41050 und 23220 have to be included, said purpose codes are presented here in a separate time series.

4. Data description
